

Angular2 & Firebase

Get up and running quickly with Angular and Firebase

Brief Overview

Live Coding

Demo1

Firestore console

https://hipsum.co/?paras=4&t...

Scott

localhost:4200

RTP EventsListAdd EventLogout

Upcoming Events

Friday June 5th at 9:00pm

New Event

Description

More Details

July 4th!

Beers & Brats

Lots of beer, lots of brats, on my roof!

More Details

All Day Everyday

```
#titanic {
float: none;
}
```

AngularFire Is Awesome

Because? Why not.

More Details

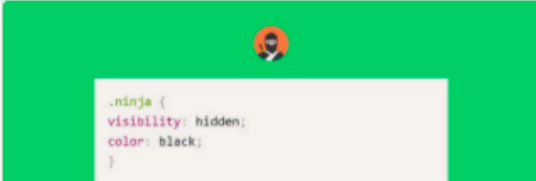

Tomorrow

July 15th 2017

It's happening now

```
.ninja {
visibility: hidden;
color: black;
}
```

Dolist.io
DISCOVER WHAT'S IMPORTANT

A smart productivity app that features the most important task on a to-do list at the moment it should be of focus.

- Focus on what's important
- Organize across home and work
- Integrates with Todoist, Amazon Alexa, and Slack

Download: <http://bit.ly/dolist-io>

Angular2 or Just “Angular”

- Front-end, component based, mobile and desktop framework
- Written in TypeScript
 - Strongly typed language
 - Similar syntax to Java
- Dependencies managed via NPM and compiled with WebPack

Google Firebase

- Backend as a Service product by google
 - Authentication
 - Database (NoSQL style)
 - Storage
 - Analytics
 - And more...
- Reactive data
 - Changes propagated to all connected clients
- Quick and easy to set up.
- Flexible.
